

CAMI Trigonometric Clock

Senior Maths Teachers: How to make Trigonometry fun in the classroom If you're in Senior Math Teacher, or interact with learners on a regular basis, then one of the most important things that you can do is to introduce a fun element in the classroom. CAMI Education has designed a Trigonometric clock to put a smile on the faces of senior maths practitioners and their students. Can you read the time on this clock?

"Yes, it really is 23 minutes past 9!" Imagine a reverse-running clock (to emulate the measuring of angles) with the "12" of the clock on the right hand side (because all angles are measured from this point) and you will immediately see the source of the fun. Put one of these clocks on your wall and watch the expressions on the faces of your colleagues. Use the CAST rule to teach your students which function is positive in each quadrant. Get a reminder of the inverses grouped together. Introduce the special triangles for 45, 30 and 60 degrees. Click on this link to learn more about the CAMI Trigonometric clock. Limited Availability We have only produced 100 of these clocks and if you react quickly by ordering your copy now, you will be assured of getting one of the 100, delivered to your doorstep. What to Do Next Have your credit card handy and click the link below to place your order. This is a 128-bit digitally encrypted 100% secure PayPal server. This means it's actually safer to use your credit card here than at a 5-star restaurant. After you place your order, you'll instantly receive a confirmation of your order. Your package, which includes the clock and a, instruction document will arrive at your home according to your choice of shipping methods.
