

About Us

CAMI is the leading developer of high performance educational software. This software is used extensively in schools, homes and by private practitioners in their own CAMI Edu-Centres.

Everything that we do is governed by a single, simple philosophy: "Will it produce results, and will it do so quickly?"

"It is very rare to find one company that is so focused on the attainment of results and to see how they have taken a lot of small ideas and combined them into a large, effective educational system." - University Professor.
